

Discipline: Analyzing, balancing, and designing mechanics, shaping core player experiences; Engineering gameplay features, in-engine tools, or workflow to support development.

- Skills**

- C#
 - Python
 - Unity
 - Version Control
 - Figma

- C++
 - Shader Graph
 - UE
 - Photoshop
 - Blender
- Languages**

- Mandarin (native)
 - English (fluent)
- Other Strength**

- Experience with a wide variety of game genres (~300 games on Steam and other platforms)
 - Cross-disciplinary skills: game development, design, and graphics
 - Extraordinary logical reasoning, critical thinking, and analytical methodology

Education

- Rensselaer polytechnic institute**

Major: Games and Simulation Art and Science, BS

Main Courses : Data Structure, Game Storytelling, Level Design, Computer Graphics, Game AI, Game Engine Architecture.

Sep. 2020 – May 2024

Minor: Computer Science
- University of Southern California**

Major: Game Design and Development, MS

Main Courses: Advance Game Production, Interactive System Design, Board Game Seminar

Sep. 2026 – Present

Academic Achievement

Undergraduate

- Consistently worked and developed an action game, “StealYourself” in 3 months. Led and coordinated regular team meetings and discussions. Modeled 3D assets in Blender; Facilitated playtests and iterated based on feedback.
- Acquired wide range of game related knowledge including game AI, narrative expression, level/system design, project management. Implemented features in C++, such as 3D math and matrix operation, rigid body dynamics, collision detection.

Work Experience

- Yanmonet**

Title: Gameplay Engineer intern

• Liaise with other team members to integrate visual effects into the engine.

• Implemented setting system, using FairyGUI to build UI layout in the workflow.

May 2023 to Aug. 2023
- Tianying Culture Communication Co., Ltd.**

Title: Motion Capturing Coordinator & Interpreter

• Translated emails, game design documents, and customer feedback.

• Design and modify working pipeline to increase efficiency.

• Coordinated and communicated with multiple departments, conducting meetings and providing interpretation to ensure alignment with the client's plans and requirements.

• Developed a maintainable combat system in UE5 using Gameplay Ability System (GAS) and Blueprint scripting.

March 2025 to Dec. 2025
- Kotoko Technology**

Title: Client Engineer

• Implemented features in Unity including dynamic variable-height scroll views, social feed UI with full feature integration, integrated backend APIs and game services, localization workflows, debugging, and editor tooling.

• Developed an automation tool for localization that identifies text across Prefab assets and auto-attaches localization components, reducing migration time by 50%.

Dec. 2025 to March 2026

Projects

- Hunt the Darkness**

Authored and maintained a comprehensive 28,000+ word design document, establishing game vision, pillars, and detailed mechanics for the project.

In Progress · Personal indie
- ZWorkflow**

An AI-assisted workflow that connects design documents, specifications, implementation, and validation. Supports multiple AI coding tools, Unity visualized workbench, bilingual specs, and accelerated C# analysis.

Personal creation
- ActionQueue architecture**

Designed a reusable, system-level framework tailored to orchestrate nested events, asynchronous input, and extensible chained effects, specifically resolving multi-derivation and cascading effect challenges within deterministic ordering. Created an IDE-style visual debugger with action trees, breakpoints, and single-step execution.

Personal creation

Gamejam projects

Outlaw's Deadend Aug. 2025 Team lead · Designer · Programmer • Designed mechanics, puzzles, and content • Implemented the full technical stack and level editor • Distributed responsibilities across the team to manage project	Alive June 2025 Team lead · Designer · Programmer • Designed card content, completed implementation • Managed the project from concept to delivery • Distributed responsibilities across the team to manage project
Sushi-Go-lette Sept. 2025 Programmer · Boss behavior designer • Built the boss state machine and authored readable combat states • Implemented gameplay features with network synchronization	Cracked Nov. 2023 Designer · Programmer • Led brainstorming, shaped the player experience • Implemented gameplay features
